

CSS Functions

CSS functions are used as a value for various CSS properties.

Function	Description
<u>attr()</u>	Returns the value of an attribute of the selected element
<u>calc()</u>	Allows you to perform calculations to determine CSS property values
<u>cubic-bezier()</u>	Defines a Cubic Bezier curve
<u>hsl()</u>	Defines colors using the Hue-Saturation-Lightness model (HSL)
<u>hsla()</u>	Defines colors using the Hue-Saturation-Lightness-Alpha model (HSLA)
<u>linear-gradient()</u>	Sets a linear gradient as the background image. Define at least two colors (top to bottom)
<u>radial-gradient()</u>	Sets a radial gradient as the background image. Define at least two colors (center to edges)
<u>repeating-linear-gradient()</u>	Repeats a linear gradient
<u>repeating-radial-gradient()</u>	Repeats a radial gradient
<u>rgb()</u>	Defines colors using the Red-Green-Blue model (RGB)
<u>rgba()</u>	Defines colors using the Red-Green-Blue-Alpha model (RGBA)
<u>var()</u>	Inserts the value of a custom property
